Adult & paediatric
certified use

3/7/12
channels recorder
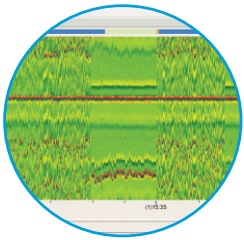

DIAGNOSTIC CONFIDENCE

99.5% sensitivity in AF detection
Our efforts to have the finest detection of atrial fibrillation possible resulted in 99.5% sensitivity even in patients having paroxysmal form of the disorder.

Complete Holter record in one sight
Poincaré graph visualizes all rhythm disorders from a complete record in a single graph and reveals their details in a single click.

Abnormalities at first sight
Relief map allows immediate detection of all irregularities, including those that can be barely read from classic ECG signal display.
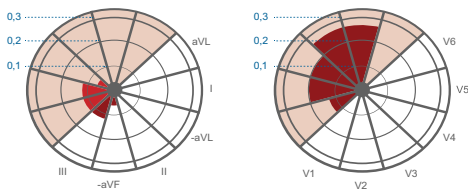

DIAGNOSTIC CONFIDENCE

Keep Data Safe

Have your patient under control by receiving ECG signal continuously. Guaranteed automatic signal recovery in case of interruption.
No data loss.

Visualize the ST

ST maps help immediately recognize common pathologies associated with ST segment, e.g. they can be useful in validating mirrored ST elevations in case of posterior myocardial infarctions.

CHOOSE WHAT   FITS YOU

Meeting our customer's needs is our goal. Tell us your requests and we'll be happy to present you a solution that fits you the best.
