

BTL CARDIOPPOINT CPET

DESIGNED TO MAKE THE TESTING EASY

Compact design

Supreme measurement accuracy

Easy operation

ATTRACTIVE EXTENSIONS

Sudden cardiac death screening

Automatic blood pressure measurement

Vacuum electrodes system

Cardiopulmonary diagnostics

Sports medicine

Nutritional assessment

FIELD OF USE

BTLNET.COM

EXPERIENCE THE FLOW WITH OUR SPIROMETRY

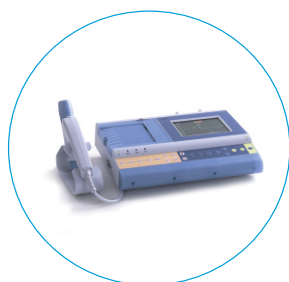

Professional diagnostic

BTL spirometry performs FVC, SVC and MVV tests designed in compliance with the ATS/ERS standards. Selecting the desired predictive norm provides you with automatic interpretation from ATS, BTS, Enright and GOLD.

Adult and paediatric testing

BTL spirometer offers universal usage for all patients. Thanks to a wide range of predictive norms, the system instantly gives evaluation for every patient according to their age, gender or ethnicity.

YOUR CHOICE, YOUR DEVICE

BTL-08 Spiro Pro

BTL CardioPoint SPIRO

OUR TECHNOLOGY, YOUR BENEFITS

Optimized data display

Vertically positioned monitors allow simultaneous observation of the ECG and gas data and support touch operation. The ECG software is perfectly synchronized with the software for the gas analysis. For any selected pulmonary data, the corresponding ECG strip is shown and vice versa.

Comfortable calibration

Ergonomically positioned calibration syringe and gas cylinder make the system calibration more comfortable. There is no need to hold the syringe during calibration, nor to walk around the station to reach the gas cylinder.

Minimum running costs

Low price of our flowmeters allows them to be used as a disposable item. Moreover, our flowmeters contain no moving parts and cause only minimum resistance to the air flow.
